MIL0
...OF CLIMBING

Extendo – 4-way stretch fabric with a robust outer- and moisture regulating inner surface. Made from polyamide and elastane fibers (92% / 8%). Extendo dries rapidly, is highly elastic, retains its shape and is light and breathable. These make it first choice for all active travellers, trekkers and climbers.

Extendo LT – a lighter, and at the same time thinner version of Extendo material used for the production of hiking pants for use during spring and summer seasons. It provides better thermal comfort at high temperatures while retaining other features of Extendo like the flexibility and strength.

Extendo WN – heavier and thicker version of Extendo. Increased density and warmer inner lining make the fabric especially suitable for lower temperature usage providing better wind and thermal protection. Used for production of garments for intense activities like ski touring, climbing etc.

Supplex® – a fabric manufactured by Invista that combines the softness and grip of cotton with all the best properties of polyamide. It is resistant to tearing and abrasion as well as it is breathable. Thanks to thin polyamide fibres used for manufacturing it is up to 30% softer than standard polyamide fabrics.

Cotton Stretch – a 4-way stretch cotton fabric with an addition of 5% elastane. Thanks to its great comfort this fabric is a very good choice for manufacturing appealing climbing and bouldering garments.

Eclipse – group of lightweight, pilling resistant technical knitted fabrics which wick moisture away from the body to the next layer of the clothing. Eclipse has a soft feel, dries rapidly and is very breathable. Available in different mixtures of polyester, elastane (Eclipse Stretch) and cotton (Eclipse Cotton).

Midora Pro – fabric made of a mixture of polyester and polyamide fibres with 420D, 600D and 1000D thicknesses. Midora is highly durable and abrasion resistant making it excellent for backpacks, travelling and trekking accessories. It comes with a water resistant polyurethane coating.

Milo Sport reserves the right to modify any of the products presented in the catalogue, if it considers it appropriate. Note: Because of the limitations of the printing process, the colours of the products shown in this catalogue do not always match the real shades of fabrics used. Should any doubts arise, please consult the company. All products presented in the catalogue have the benefit of our two-year warranty for workmanship and fabrics. Warranty claims can only be considered upon submission of the warranty card attached to each product. Care should be taken while maintaining our products and the special, written instructions for use provided with each product should be followed. Warranty conditions: The warranty card allows the purchaser to exercise their rights, under the warranty. Milo Sport products identified with our warranty label have a 24 month warranty for all design and fabric defects and for workmanship, which shall be to the standards set by the company. Repairs undertaken under warranty do not extend the warranty period. The warranty does not cover mechanical damages caused by the use, or wear of elements and damages resultant from non-conformity to the instructions for use. Your statutory rights are unaffected.

Gelanots® – membrane created by the Toyota Tsusho Corporation, one of the leading trading houses in Japan with leading technologies for waterproof breathable fabrics for the sportswear and other high end apparel applications. Gelanots® quickly gained the trust of the newest generation of fabric enthusiasts all over the world. This smart fabric is created in several versions, including the ones used by Milo: 3-layer Ultralight (80g/m²) where the outer ripstop layer is combined with a breathable and waterproof membrane and 3-layer Lightweight with mechanical Stretch (140g/m²). All versions of Gelanots® membranes have excellent waterproof performance up to 22.000mm/H₂O and breathability up to 70.000g/m²/24h. As a result it efficiently transports water away from the body thus avoiding the process of condensation. Gelanots® laminates are not microporous so they retain their windproof, waterproof and breathable qualities independently from time of use.

Aquatex™ – these fabrics comprise of a group of different materials covered with a layer of microporous polyurethane. This layer manages to achieve two opposing characteristics. Because particles of water are bigger than the micropores Aquatex is waterproof and windproof. On the other hand the molecules of vapour produced by a body during physical exertion are much smaller than the polyurethane micropores, so perspiration can permeate to the outer layer of material where it evaporates into the air. This effect is known as "breathability", maintaining a natural microclimate near the skin and reducing the sensation of overheating and discomfort due to moisture remaining between outer clothes and body.

Duck down – Natural duck down is an excellent insulation material in outdoor clothing. Its unique thermal properties keep warmth and provide excellent protection against cold. In addition, duck down is lightweight, soft, and flexible, making it comfortable and easy to wear. Thanks to its natural structure, duck down also provides good breathability, which is important during outdoor activities.

Primaloft® is currently one of the best alternatives to down. Milo uses the most universal insulation weights: 100g/m² and 60g/m².

Primaloft® Silver – the perfect combination of high performance insulation and value. This technology combines ultra-fine and multi-diameter fibers for specific performance characteristics. The specially treated ultra-fine fibers help to form a water resistant insulating structure, while the multi-diameter fibers help to build loft.

Polartec® Thermal Pro® FR is a fabric platform that embodies the versatile style applications of synthetic fleece. A diverse variety of knitting techniques create unique surface structures without sacrificing thermoregulation performance. The adapted look and feel still delivers the warmth and comfort of classic fleece.

Polartec® 100 Micro – these fabrics are the standard for lightweight warmth and breathability. Tight knit construction features 100% polyester microfibers and dries quickly. These durable, non-pilling fabrics maintain their insulation properties after repeated cleaning. 100 Micro fabrics keep you warm and comfortable in a wide range of conditions while remaining lightweight and easy to pack.

Polartec® Delta™ – was created so cooling fabric technologies could better utilize the body's natural cooling process: sweat. Next-to-skin fabrics that target wicking and fast drying will keep moisture moving, but don't work towards actually cooling the body down. Delta™ works more efficiently by elevating touch-points for increased airflow, faster moisture dispersal, and reduced wet-cling.

Polartec® Power Dry® is the most advanced next-to-skin moisture management fabric. By using proprietary bi-component knit construction, every fiber works with maximum efficiency. Moisture is quickly pulled away from the body and transferred to the outer surface for faster evaporation during activity.

Softshell 2 – 2-layer fabric constructed of 4-way stretch outer layer bonded to a fleece inner layer. It offers maximum freedom of movement combined with warmth, softness and wind protection.

Nanoqpile – group of fabrics which are chosen and developed after targeted testing to get the best possible characteristics and performance, suitable for a broad spectrum of insulation applications. They can be thermoactive and stretch when used for manufacturing performance garments (Nanoqpile Stretch), warm, skin friendly and appealing for manufacturing everyday jackets (Nanoqpile 2) or comfortable and technical for light weight fleece jackets (Nanoqpile 1).

THE MILO STORY

The story begins in a small flat behind the iron curtain where two climbers, founders and owners of Milo, started to sew their first pants and jackets on two simple sewing machines. They were amongst the first Polish pioneers of outdoor clothing. In the early 90's they decided to develop their ideas and establish their own brand and Milo was born. In 1993 this small company started its big climb. Right from the start the products were originally designed and produced to the highest standards, and after just a few years Milo gained recognition as a brand producing smart, good quality garments for conscious climbers and mountaineers.

Welcome !

Please check out the latest Milo collection for the SS/AW 2024 season. You can find comprehensive information about the products on-line on our website www.milo.pl. Marketing resources such as photos, product descriptions and logos are available for download on the B2B platform, where you can also place orders 24/7.

We hope you enjoy our latest collection!

COLORS

red race/blue sky/titanium grey

blue sky/mirabelle/red race

titanium grey/blue sky

FABRIC 100% Polyamide

FILLING duck down 90/10 (600 cuin)

Thick and warm down jacket for winter outdoor use. The cut is movement friendly so the jacket will not twist and rise during any kind of activities. The wide-open zipped front pockets are placed high enough to be accessible when carrying a backpack with a closed hip belt or wearing a harness. There is also an additional, easily accessible pocket on the chest for a smartphone or a wallet. On the inner side there are two open pockets to carry winter gloves or goggles and a practical zipped pocket to turn the jacket into a down pillow.

The padded hood is adjustable in two dimensions to be as close to the head as possible. The bottom of both sleeves are equipped with stretch cuffs with thumb holes. The ladies' version has the same features tailored to fit women.

FABRIC Gelanots® 3 L

WATERPROOF 20 000 mm/H2O

BREATHABILITY 34 000 g/m²/24h

Technical mountaineering jacket manufactured from robust, yet slightly elastic fabric bonded with Gelanots® 3-layer membrane providing high waterproofness and breathability levels. As all Milo technical garments its cut is move-friendly and keeps the jacket in the right place. Pockets are placed high to ensure easy access even when wearing a backpack with closed hip belt. Fully adjustable hood fits a mountaineering helmet. 2-way underarm ventilation provides additional thermal comfort during intensive activities. Equipped with 3 pockets, 1 of them accessible from the inside.

FABRIC Nanoqpile 1

Light fleece sweater with integrated hood and elastic panels for great comfort and fresh look. Made of a combination of mid-weight Nanoqpile 1 and comfortable Nanoqpile Stretch fabrics. Elastic cuffs are equipped with thumb holes which help to keep the palms of your hands warm and prevent the jacket from moving around when climbing or running. The hem is adjustable and finished with anti-lifting silicone print on the inside. Two spacious hand pockets are zipped.

lime green/blue

FABRIC Cotton Stretch

Climbing pants made of cotton with an addition of elastic yarn and a movement-friendly cut. Slightly tapered downwards, with an elastic hems at the bottom of the legs for easier moves on climbing routes. Thanks to profiled knees and elastic waist with the possibility of tightening with a string, they do not restrict movements. Equipped with 4 deep pockets and a narrow pocket for storing a brush for cleaning rocks or artificial holds.

- navy blue 

FABRIC 100% Polyamide

Climbing pants that are second to none when it comes to low weight combined with high durability. They have a regular cut and thanks to the gusset in the crotch and profiled knees they do not restrict movements. The circumference of the bottom of the legs can be pulled down so that it does not get in the way when climbing and the waist circumference is adjustable with a webbing so you do not need to use an additional belt. The pants have 3 spacious pockets and a narrow pocket for a brush.
